SUMMARY

Full-Stack Engineer who architects and ships complete systems independently, from database schema to production infrastructure. Built multi-tenant SaaS platforms, real-time marketplaces, and AI-powered products across fintech, edtech, and e-commerce, owning every layer from Next.js frontend to AWS EC2 deployment.

SKILLS

Frameworks: Next.js, React.js, Node.js, Express.js, React Native, Elysia.js

Programming: TypeScript, JavaScript

Databases: MongoDB, Prisma ORM, Redis

DevOps: AWS EC2, AWS S3, Cloudflare, Docker, Nginx, GitHub Actions

Tools/Platforms: Socket.IO, Stripe, Stripe Connect, Shopify, Make.com, VideoSDK, Webflow

Spoken Languages : Arabic (Native), English (Professional)

PROFESSIONAL EXPERIENCE

Makan Design, Remote: Full-Stack Software Developer

Jul 2024 – Present

- Designed and built a production internal CRM on Next.js and AWS EC2, consolidating project management, client records, quotation workflows, vendor tracking, and financial data into a single RBAC-controlled platform, now maintained part-time alongside active development.
- Built a document engine with versioned quotations, full audit trails, multi-tier product catalog, tokenized share links, e-signature collection via Signit API, and multi-currency vendor management with exchange rate handling.
- Replaced a paid Airtable-to-Shopify sync with a custom Node.js ETL pipeline, cutting operational costs by 75% and sync throughput by 50%. Eliminated three third-party Shopify app dependencies natively in Liquid.

Tafawwaq, Remote: Full-Stack Developer (Hourly)

Jul 2025 – Present

- Architected a multi-sided marketplace from zero as the sole engineer: booking lifecycle modeled as a finite state machine, real-time video sessions via VideoSDK, role-specific dashboards for students, tutors, and admins, and a full admin panel covering user management, payout oversight, and platform analytics.
- Designed a Stripe Connect split-payment architecture with a custom balance ledger: session-completion credits, configurable hold periods, tutor-initiated withdrawals, and a full audit trail. Built invoice PDF generation into the checkout flow.
- Engineered the real-time layer using bidirectional Socket.io: live notifications, session state sync, and in-session chat across concurrent users. Deployed the full stack on AWS EC2 with Docker, Nginx reverse proxy, and GitHub Actions CI/CD.

RELEVANT PROJECTS

RepyAI – AI-Powered Customer Support Platform

Apr 2025 - Sep 2025

- Architected a multi-tenant AI support platform: embeddable iframe widget, RAG-style knowledge retrieval using HuggingFace embeddings and cosine similarity, LLM tool-use for handover and chat-end transitions, and a human-agent inbox with real-time Socket.io sync.

Menulizer – Digital Menu for Restaurants

Sep 2025 - Nov 2025

- Built a full-stack restaurant SaaS with QR-code menus, table-based ordering with a status lifecycle, push notifications for staff, drag-and-drop menu management, and plan-gated subscription billing.

Expenselizer – Personal Finance Tracking Platform

Dec 2025 - Feb 2026

- Built a bilingual (EN/AR) expense tracking SaaS with an analytics dashboard and a Telegram bot using a DB-persisted state machine for serverless-compatible conversational logging.

EDUCATION

B.S. in Computer Science

Graduated Jun 2024

Nahda University, Bani Sweif, Egypt

Relevant coursework: Software/Hardware Design, Programming Languages, Programmable Logic
