SUMMARY

Full-Stack Developer building SaaS platforms, AI-powered products, and internal business tools from architecture to deployment. Shipped production-grade systems across education, retail, hiring, and fintech independently.

SKILLS

Frameworks: Next.js, React.js, Node.js, Express.js, React Native, Elysia.js

Programming: TypeScript, JavaScript

Databases: MongoDB, Prisma ORM, Redis

DevOps: AWS EC2, AWS S3, Cloudflare, Docker, Nginx, GitHub Actions

Tools/Platforms: Socket.IO, Stripe, Stripe Connect, Shopify, Make.com, VideoSDK, Webflow

Spoken Languages : Arabic (Native), English (Professional)

PROFESSIONAL EXPERIENCE

Makan Design, Remote: Fullstack developer

Jul 2024 – May 2026

- Designed and built a custom internal CRM from zero, consolidating project management, client records, quotation workflows, vendor tracking, and financial data into a single platform. Replaced a fragmented stack of spreadsheets, Airtable, and WhatsApp with a structured, role-controlled system.
- Built a document engine handling versioned quotations with full audit trails, a managed product catalog with multi-tier pricing and tagging, tokenized client-facing share links, and e-signature collection via Signit API.
- Replaced a paid Airtable-to-Shopify sync integration with a custom Node.js pipeline, cutting operational costs by 75% and improving sync throughput by 50%. Extended the Shopify storefront by rewriting theme logic in Liquid, eliminating three third-party app dependencies.

Tafawwaq, Remote: Full-Stack Developer (Hourly)

Jul 2025 – Present

- Architected and shipped a multi-sided marketplace from zero, including a booking lifecycle engine, real-time session infrastructure, and role-specific dashboards for students, tutors, and admins.
- Designed a split-payment system using Stripe Connect with a custom balance ledger: credits on session completion, configurable hold periods, and tutor-initiated withdrawals with full audit trail.
- Built a bidirectional Socket.io layer handling live notifications, session state sync, and in-session chat across concurrent users.

RELEVANT PROJECTS

RepyAI – AI-Powered Customer Support Platform

Apr 2025 - May 2025

- Built a platform with an embeddable iframe chat widget, an AI agent backed by a vector-embedded knowledge base, and a human-agent inbox for handover conversations.
- Implemented RAG-style retrieval using embeddings and cosine similarity, with LLM tool-use for selecting the most relevant knowledge handover and chat-end state transitions.

Menulizer – Digital Menu for Restaurants

Sep 2025 - Nov 2025

- Built a platform for restaurants and cafes to create QR-code-accessible digital menus with real-time updates, order tracking, and analytics.

Expenselizer – Personal Finance Tracking Platform

Jun 2025 - Jul 2025

- Built a bilingual (EN/AR) expense tracking SaaS with a web dashboard for analytics, category management, and income/expense CRUD.
- Integrated a Telegram bot for conversational expense logging without opening the app, with DB-persisted conversation state for serverless compatibility.

EDUCATION

B.S. in Computer Science

Graduated Jun 2024

Nahda University, Bani Sweif, Egypt

Relevant coursework: Software/Hardware Design, Programming Languages, Programmable Logic
